

<b>Last Name</b>	<b>Poster Title</b>	<b>Number</b>
Enas Abu Shah (Technion, Israel)	Reconstitution of actin-based motility inside a cell-like compartment	1
Jean Alric (Institut de Biologie Physico- Chimique, France)	Does photosynthesis sense mechanical constraints?	2
Borja Aragues (Max Planck Institute for Metals Research, Germany)	Nanopatterned mechanotunable substrates for cell adhesion studies	3
Atef Asnacios (University of Paris, Diderot, France)	A single cell acts as a muscle	4
Ronen Avni (Technion, Israel)	Model for lamellipodium motility	5
Yoav Biton (Weizmann Institute of Science, Israel)	Cellular response to geometrical and mechanical stimuli	6
Christian Boehm (Max Planck Institute for Metals Research, Germany)	Microfluidics – biological assays at the microscale	7
Heike Boehm (Max Planck Institute for Metals Research, Germany)	Micromechanical map of hyaluronan-rich cell coats	8
Pierre Bohec (Research Laboratory, “Materies et Systemes Complexes,” France)	Fluctuation forces in living systems	9
Amnon Buxboim (University of Pennsylvania, USA)	Physics of the microenvironment: How far do cells feel?	10
Letizia Carramusa (Max Planck Institute, Germany)	Force-induced interplay between podosomes and focal adhesions	11
Olivier Couture (Institut Langevin, ESPCI, France)	Influence of microstructures on ultrasound elastography (with Mickael Tanter)	12
Dekel Dado (Technion, Israel)	Cell-scaffold mechanical interplay with engineered tissue	13
Christian Dahmann	Increased cell bond tension governs cell sorting at the <i>Drosophila</i>	14

(Max Planck Institute, Germany)	anteroposterior compartment boundary	
Maxime Deforet (Institut Curie, France)	Spatially limited growth of epithelium	15
Serge Dmitrieff (ESPCI, France)	Cell infection by toxin via mechanosensitive membrane tubulation	16
Elisabeth Fischer-Friedrich (Weizmann Institute of Science, Israel)	Intra- and intercellular fluctuations in Min protein dynamics decrease with cell age	17
Benjamin Friedrich (Weizmann Institute of Science, Israel)	Physics of cellular chemosensing in spermatozoa	18
Naama Gal (Technion, Israel)	Transport of particles in living cells	19
François Gallet (Research Laboratory, "Matières et Systèmes Complexes," France)	Crosstalk between integrins and cadherins in living cells	20
Barak Gilboa (Ben Gurion University, Israel)	Bidirectional cooperative motion of myosin II motors on actin tracks with randomly alternating polarities	21
Thomas Guerin (Institut Curie, France)	Active and passive friction in models of rigidly coupled molecular motors	22
Yaron Ideses (Ben-Gurion University, Israel)	Artificial finger-like protrusion dynamics	23
Irena Ivanovska (University of Pennsylvania, USA)	Nano-films of collagen fibrils – effect of cross-linking on cells	24
Ramaswamy Krishnan (Harvard University, USA)	Endothelial monolayer integrity is regulated by physical forces	25
Sebastian Kruss (Max Planck Institute for Metals Research, Germany)	Quantification of cell arrest in small vessels by mimicking selectin-carbohydrate interactions in nanostructured channels	26
Arnon Lieber (Technion, Israel)	The interplay between membrane tension and actin dynamics in motile epithelial fish keratocytes	27
Demosthene Mitrossilis (University of Paris, Diderot, France)	Real-time single cell response to stiffness	28

Suryaprakash Nagaraja Rao (Indian Institute of Science, India)	Amazing power of chiral liquid crystals in the study of enantiomers using NMR spectroscopy	29
Maithreyi Narasimha (Tata Institute of Fundamental Research, India)	Surface adhesion and active stresses pattern cell behaviors during <i>Drosophila</i> morphogenesis	30
Noa Ofer (Technion, Israel)	Keratocyte fragments: A simplified model system for studying actin- based cell motility	31
Naomi Oppenheimer (Tel-Aviv University, Israel)	Correlated diffusion of membrane proteins	32
Barak Peleg (Weizmann Institute of Science, Israel)	Up and down: Membrane protrusions and waves driven by concave and convex actin activators	33
Matthieu Piel (Institut Curie, France)	External forces orient the mitotic spindle	34
Masha Prager- Khoutorsky (McGill University, Canada)	Examination of the role of microtubules during osmosensory transduction in supraoptic nucleus neurons	35
Dikla Raz-Ben Aroush (Weizmann Institute of Science, Israel)	Mechanics of cell adhesion: A materials science approach	36
Florian Rehfeldt (Georg-August University, Germany)	Cell matrix mechanics elucidated with model systems in two- and three dimensions	37
Claudio Rolli (Max Planck Institute for Metals Research, Germany)	Active cell deformation and cell migration mechanisms inside microchannels	38
Simon Scheuring (Institut Curie, France)	Analysis of adhesion and water-channeling of junctional eye lens- specific aquaporin	39
Christian Schreiber (University of Cambridge, UK)	Excluded volume effects in actin-based motility	40
Alice Schwede (Max Planck Institute for Metals Research, Germany)	Cell cycle control by mechanical stress	41
Roie Shlomovitz (Weizmann Institute of Science,	Membrane-mediated interactions between FtsZ rings	42

Israel)		
Deepak Sinha (Ecole Normale Supérieure, France)	Photocontrol of protein activity in a single cell of a live organism	43
Orit Siton (Ben-Gurion University, Israel)	Cortactin: An effector of cell propulsion	44
Ana-Suncana Smith (Institute for Theoretical Physics, University of Erlangen-Nuernberg, Germany)	Formation of ligand-receptor bond aggregates: From 2D affinity, over membrane-transmitted correlations, to domain types	45
Thomas Striebel (Institute for Zoology, KIT, Germany)	3D scaffolds for cell experiments made by direct laser writing (DLW)	46
Mickael Tanter (Institut Langevin, France)	Influence of tissue microstructures on ultrasound elastography (with Olivier Couture)	12
Alex Veksler (Lehigh University, USA)	Model of actomyosin assembly to the contractile furrow during cytokinesis	47
Catherine Villard (CNRS, France)	Neurons on micro-patterns: Toward an <i>in vitro</i> control of axonal polarization	48
Julian Weichsel (Bioquant, University of Heidelberg, Germany)	Structural transitions in growing actin networks	49
Haguy Wolfenson (Weizmann Institute of Science and Tel Aviv University, Israel)	Molecular kinetics of focal adhesion components and mechanosensitivity	50
Tetsuya Yamamoto	Hybrid lipid as a biological surfactant	51
Shlomit Yehudai-Resheff (Technion, Israel)	Cell surface area regulation in motile cells	52
Muhammad Zaman (Boston University, USA)	Quantifying the cooperative roles of matrix mechanics and matrix-derived signaling in 3D cell migration	53
Adam Zeiger (MIT, USA)	Pericyte actin-myosin mediated contraction at the cell-material interface can modulate the microvascular niche	54
Yuliya Zilberman (Weizmann Institute of Science, Israel)	Actin and microtubule-dependent reorganization of Golgi complex induced by activation of mDia1 formin	55
