

PANIC08 - List of Posters

Reconstruction of Neutral Strange Particles Using Combined Kinematical and Topological Method

Alexandre Alakhverdyants, Joint Institute for Nuclear Research

Nonlocal Axial Anomaly and rare decays of pseudoscalar mesons

Vladimir Andrianov, St.Petersburg State University

Spontaneous P-parity Violation at Large Chemical Potentials and Temperatures

Alexander Andrianov, University of Barcelona and ICC

Search for Charged Higgs Bosons in top quark pair decay products in the ppbar collisions at $\sqrt{s}=1.96$ TeV

Mikhail Arov, Louisiana Tech University

Time-Space Properties for Collisions of Relativistic Deuterons at Gold Target

Sergej Avdeyev, JINR, Dubna

Polarization Aspects of the Process of d^{\pm} -pair Production in Free and Quasi-Free (in Nuclear Matter) Proton-Proton Collisions

Vsevolod Balashov, Institute of Nuclear Physics, Moscow State University

Ultra Cold Neutron Magnetic Trapping and Neutron Lifetime Measurement

Gilles Ban, LPC CAEN CNRS IN2P3

W and Z Production Constraints on PDF with CMS

Pawel de Barbaro, University of Rochester

Diboson production

Thomas Barber, Cambridge University

High Energy Neutrino Point Source Search with the ANTARES Telescope

Bruny Baret, A.P.C., Paris

Are There Compact Heavy Four-Quark Bound States?

Nir Barnea, The Hebrew University of Jerusalem

Tensor Interaction Constraints From Beta-Decay Recoil Spin Asymmetry Using Trapped Atoms

John Behr, TRIUMF

Fundamental Tests of Chiral Perturbation Theory from Charged Kaon Decays at NA48

Brigitte Bloch-Devaux, Saclay

Electroproduction of the $N^(1535)$ resonance at large momentum transfers*

Vladimir Braun, University of Regensburg

Z Boson Forward-background Asymmetry at ATLAS
Eyal Brodet, Tel-Aviv University

*Study of the Production of $3(\Lambda)H$ and $4(\Lambda)H$ Hyperfragments
Following the Interaction of K^- at Rest with p -Shell Nuclei*
Stefania Bufalino, INFN-Sezione di Torino

Neutrino-Induced Neutral Pion Production at SciBooNE
Juan Catala, Valencia University

Search for Excited Quarks in Gamma+Jet Final State at the LHC
Sushil Singh Chauhan, Department of Physics and Astrophysics,
University of Delhi

Chiral View on Low Energy Antikaon-Nucleon Interactions
Ales Cieply, Nuclear Physics Institute, Rez

Search for New Physics with Kaon Decays in the NA62 Experiment at CERN
Gianmaria Collazuol, INFN, Pisa

*Electromagnetic Calorimeter of CMS, Status and Performance on First Data from
LHC*
Seth Cooper, University of Minnesota

Monte-Carlo Simulations of QCD Thermodynamics in the PNJL Model
Marco Cristoforetti, TU, Munich

The CMS High-Level Trigger
Bryan Michael, Dahmes, LLNL

Determination of Optimized Bremsstrahlung Photon Parameters at TAC
Nilgun Demir, Uludag University, Turkey

LHCb Results from Start-up Run
Francesco Dettori, University of Cagliari

A Strong Theta+ Baryon in the Skyrme Model
Dmitri Diakonov, Petersburg Nuclear Physics Institute

Recent Results on Charmonia Production in the PHENIX Experiment at RHIC
Marisilvia Donadelli, Instituto de Fisica / Universidade de Sao Paulo

Study of Z' and Kaluza Klein excited Z states at LHC
Erez Etzion, Tel Aviv University

*Search for the NN - $6q$ Phase Transition in the np -polarized Measurements at
 $T_{kin} = 1 - 6$ GeV*
Michael Finger, Charles University in Prague

The Observables of Extra Neutral Gauge Bosons in Models Left-Right, B-L and 331 for e+e- Colliders

Elaine Fortes, Institute of Theoretical Physics, Sao Paulo

Long lived Chargino in AMSB

Ofir Gabizon, Weizmann Institute

Dynamically Generated Resonances with Open and Hidden Charm

Daniel Gamermann, IFIC, Valencia

Testing the Predicted Hidden Charm Scalar State X(3700) Through the D anti-D Invariant Mass Spectrum and the Radiative Decay of psi(3770)

Daniel Gamermann, IFIC, Valencia

Strange Baryonic Systems with Antikaons

Daniel Gazda, Nuclear Physics Institute, Rez

Commissioning the ATLAS Calorimeters with Cosmic Rays and First LHC Beams

Adam Gibson, Toronto University

Measurement of the Longitudinal Proton Structure Function at HERA

Julia Grebenyuk, DESY

Search for non-Standard Model Physics Using Transverse Muon Polarization in Stopped K+ Decay

Michael Hasinoff, University of British Columbia

Deeply Virtual Compton Scattering on Unpolarised Hydrogen and Deuterium at HERMES

Gordon Hill, University of Glasgow

Theoretical Implications of the TWIST Experiment Results

Anthony Hillairet, TRIUMF

Splitting the Wino Multiplet by Higher-Dimensional Operators in Anomaly Mediation

Yonit Hochberg, Weizmann Institute

Linear Sigma Model for N(940), Delta(1232) and their Chiral Partners

Atsushi Hosaka, Osaka University

Effective Chiral Lagrangian for the Nucleon and J=1/2 Resonances with SUL(2)xSUR(2) and UA(1) Symmetries

Atsushi Hosaka, Osaka University

Chiral Properties of Baryon Fields with Three Light Flavours

Atsushi Hosaka, Osaka University

The Measurement of Coherent Neutrino Scattering at the Spallation Neutron Source

Ed Hungerford, University of Houston

Perspectives of the Double Hypernuclei Physics Using Antiprotons at PANDA

Felice Iazzi, Politecnico di Torino and INFN, Torino

Study of Double Hypernuclei with Hybrid Emulsion Method

Ken'ichi Imai, Kyoto University

New Progress in Muon Catalyzed Fusion with Ortho-Para Ratio Controlled Deuterium

Hiroshi Imao, RIKEN

Description of Parity Violation in Molecules by Effective Parity Non-Conserving Molecular Hamiltonian

Timur Isaev, Frankfurt Institute for Advanced Studies

Coupled-Channel Study of Dynamically Generated Baryon Resonances in the Charm Sector

Clara Estela Jimenez Tejero, Universidad de Barcelona

Studies of Diboson Production using CMS

Keti Kaadze, Kansas State University

Precision Drift Tube Detectors for ATLAS Muon Spectrometer Upgrade at Super-LHC

Steffen Kaiser, Max-Planck-Institut f. Physik

A Search for Electron Antineutrino Appearance at MiniBooNE

Georgia Karagiorgi, Columbia U. / MIT

Dipole and Quadrupole Pion Polarizabilities

Viktor Kashevarov, P.N. Lebedev Physical Institute

1/Nc classification of hadronic states: Tetraquark core in the sigma meson

Toru Kojo, RBRC, Brookhaven National Laboratory

New analysis on narrow baryon resonance decaying into pK0s in pA-interactions at 70 GeV/c with SVD-2 setup

Elena Kokoulina, Joint Institute for Nuclear Research, Dubna

A new description of "soft" processes at high energies

Andrey Kormilitzin, Tel Aviv University

QCD Studies with CMS

Krisztian Krajczar, KFKI Research Inst. for Part. & Nuclear Physics

Latest HERMES Results on Quark Helicity Distribution from Semi-Inclusive Deep-Inelastic Scattering

Polina Kravchenko, PNPI

Absence of Low-Temperature Dependence of the Decay of ^7Be and ^{198}Au in Metallic Hosts

Vivek Kumar, Weizmann Institute of Science

Observation of Acceleration Matter Effect in Neutron Optics

Dmitro Kustov, Joint Inst. for Nuclear Research, Dubna

N to Δ Transitions from QCD Sum Rules

Frank Lee, George Washington University

Transverse (e, e') Response Function of ^3He

Winfried Leidemann, University of Trento

Calibration of the ATLAS Muon Spectrometer with the First Data

Dan Levin, Michigan University

The Axial Anomaly and Meson Decays

Huey-Wen Lin, Jefferson Lab

New Developments in Visible-sensitive Gas-avalanche Photomultipliers

Alexey Lyashenko, Weizmann Institute of Science

Spin Correlations of Muons Generated in the Process of Electron-Positron Pair Annihilation

Valery Lyuboshitz, Joint Institute for Nuclear Research, Dubna

Strangeness Conservation and Pair Correlations of Neutral Kaons with Close Momenta Produced in Inclusive Multiparticle Processes

Valery Lyuboshitz, Joint Institute for Nuclear Research, Dubna

The Coherent Inelastic Processes in Collisions of Particles and Nuclei at Ultrarelativistic Energies

Valery Lyuboshitz, Joint Institute for Nuclear Research, Dubna

Spin Structure of the Nucleon Charge-Exchange Reaction at Zero Angle and the Deuteron Charge-Exchange Breakup

Valery Lyuboshitz, Joint Institute for Nuclear Research, Dubna

The Process of Coulomb Dissociation of Weakly Bound Relativistic Hypernuclei within the Two-Cluster Model

Valery Lyuboshitz, Joint Institute for Nuclear Research, Dubna

Dynamical Generation of $1/2^+$ Strange and Non-Strange Baryons in Three-Body Systems

Alberto Martinez Torres, IFIC, Valencia

Higgs Searches with CMS at LHC

Giorgia Mila, INFN and Torino University

The Survival Probability for Diffractive Higgs Production, in Proton Proton and Nucleus Nucleus Collisions at the LHC

Jeremy Miller, Tel Aviv University

The CMS Silicon Strip Tracker

Marco Musich, INFN, Torino University

Measurement of Lambda Hyperon and Anti-Lambda Hyperon Production in p+p and Au+Au Collisions by the PHENIX Experiment

Maxim Naglis, Weizmann Institute of Science

Charm and Bottom Baryons in the Field Correlator Method in QCD

Ilya Narodetskiy, ITEP

The CMS Muon System

Francesco Navarra, INFN, Bologna University

The Next Generation Double Beta Decay Experiment SuperNEMO

NEMO Collaboration, on behalf of the NEMO collaboration

NC Coherent π^0 Production in the MiniBooNE Antineutrino Data

Van Nguyen, Massachusetts Institute of Technology

Canonically Quantized Soliton in the Bound State Approach to Heavy Baryons

Egidijus Norvaisas, Institute of Theor. Phys. and Astronomy, Vilnius University

Charged Current Pion Production in the MiniBooNE Detector

Jaroslav Nowak, Louisiana State University

Precise Measurement of the $(\pi^{\rightarrow} e \nu)/(\pi^{\rightarrow} \mu \nu)$ Branching Ratio

Toshio Numa, TRIUMF

CANDLES for the Study of Double Beta Decay of 48-Ca

Izumi Ogawa, Osaka University

Application of the Nuclear Emulsion Technology to the Target of the OPERA Detector

Vladislav Osedlo, Lomonosov Moscow State University

New Features of Nuclear Interaction at Super High Energy ($E_0 > 10^{16}$ eV)

Vladislav Osedlo, Moscow State University

Observation of the Rare Non-Mesonic Weak Decay of Hypernucleus

$4_{\Lambda}\text{He} \rightarrow d+d$

Haruhiko Ota, RIKEN Nishina Center, RIKEN

B_s → μ⁺μ⁻ with CMS

Supreet Pal Singh, Panjab University

Positivity violation of the gluon propagator in full QCD

Maria B. Parappilly, Flinders University

First Results from the Recoil Detector System at Hermes

Roberto Perez-Benito, Justus-Liebig University, Giessen

Bayesian Methods for Parameter Estimation in Effective Field Theories

Daniel Phillips, Ohio University

Hard photo-disintegration of a proton pair

Ishay Pomerantz, Tel Aviv University

*Quark-Antiquark Energy Density Function applied to Di-Gauge Bosons
Production at the LHC*

Erez Reinherz-Aronis, Tel-Aviv University

*Measurement of $\phi \rightarrow K^+K^-$ Decay for 200 GeV p+p, d+Au and Au+Au Collisions
in the PHENIX Experiment at RHIC*

Yuriy Riabov, PNPI

The EUDET High Resolution Telescope

Philipp Roloff, DESY

Stochastic Evaluation of High-Energy Potential Scattering

Roland Rosenfelder, Paul Scherrer Institut (PSI)

Low Energy Electromagnetic Reactions within the Chiral Effective Field Theory

Dagmara Rozpedzik, Institute of Physics, Jagiellonian University

The (π^- , K^+) Reaction on ^{28}Si and the Sigma-Nucleus Potential

Jacek Rozynek, Soltan Insitute for Nuclear Studies, Warsaw, Poland

*Nonextensive Effects on the Nambu Jona-Lasinio Model of Strongly Interacting
Matter*

Jacek Rozynek, Soltan Insitute for Nuclear Studies, Warsaw, Poland

The Corrections to Nuclear Equation of State from Deep Inelastic Scattering

Jacek Rozynek, Soltan Insitute for Nuclear Studies, Warsaw, Poland

Looking into the QGP: Direct Photons at PHENIX

Baldo Sahlmüller, University of Muenster

Critical Behavior of Transport Coefficients Near the Chiral Phase Transition

Chihiro Sasaki, TU Munich

Strangeness Production in Heavy Ion Collisions close to Threshold with HADES

Alexander Schmah, TU Munich

Modern Energy Density Functional And The Nuclear Matter Equation of State
Shalom Shlomo, Texas A&M University

Measurements of Single Top Quark Production from CDF
Pekka Sinervo, Toronto University and Weizmann Institute

Measurement of the Top Production Cross Section Rate from Gluon-Gluon Fusion at CDF
Pekka Sinervo, Toronto University and Weizmann Institute

*Two-Pion Production in NN Collisions -- Roper, Double-Delta and Delta(1600) Excitations**
Tatiana Skorodko, University of Tuebingen

Eigenvalue Repulsion in an Effective Theory of SU(2) Wilson Lines in Three Dimensions
Dominik Smith, Institute For Theoretical Physics, University of Frankfurt

The STAR Forward GEM Tracker
Bernd Surrow, MIT

EPECUR: Search for Cryptoexotic Non-strange Member of the Pentaquark Antidecuplet in the Elastic Pion-Proton Scattering and Kaon-Lambda Production
Dmitry Svirida, ITEP

Search for BSM Physics with the ATLAS Experiment Using High p_T Leptons
Matthew Tamsett, Royal Holloway University, London

Precision Spectroscopy of Kaonic Helium-4 X-rays
Hideyuki Tatsuno, University of Tokyo

New Covariant Constraints for New Forces of Nature
Jeffrey Tithof, University of Tennessee

Shell-Model Study on Sigma-Mixing in Neutron-Rich Lambda Hypernuclei
Atsushi Umeya, Osaka Electro-Communication University

Dimensional Scaling at Moderate Energies and Symmetries of QCD
Yury Uzikov, Joint Institute for Nuclear Research, Dubna

Jet Quenching Studies in CMS
Gabor Veres, KFKI Research Inst. for Part. & Nucl. Phys

Forward and Diffractive Physics with CMS
Antonio Vilela Pereira, INFN, Torino University

Electroweak Physics at HERA
Michal Wlasenko, University of Bonn
