Eigenvalue Asymptotics for Dirichlet-to-Neumann Operator

Abstract:

Let $X$ be a compact manifold with the boundary $\partial X$ and $R (\lambda)$ be a Dirichlet-to-Neumann operator: $R (\lambda) : f \mapsto u_{\partial X}$ where $u$ solves $(\Delta + \lambda^2) u = 0, \ u_{\partial X} = f$. We establish asymptotics as $\lambda \to +\infty$ of the number of eigenvalues of $\lambda^{-1} R (\lambda)$ between $s_1$ and $s_2$.
