

1- "Memory from A to Z - Keywords, Concepts, and Beyond", written by Yadin Dudai, Oxford University Press

Yadin Dudai's Book is out! See what our colleagues wrote about it:

"Yadin Dudai has created a wonderfully engaging, unique and thoughtful collection of mini-essays on a wide range of memory and memory-related topics. Although the topics really do range from A-Z, the book is not a dictionary or encyclopedia. It consists of novel, critical and up-to-date discussions of current as well as timeless conceptual and methodological issues in memory and memory research. This book is a "must read" (and must have handy) for all who are seriously interested in what is known and not known about the nature and neural bases of memory." -**James L. McGaugh, Director, Center for the Neurobiology of Learning and Memory; Research Professor of Neurobiology and Behavior, University of California.**

"Dudai's Memory from A-Z reflects a depth of knowledge and wisdom surpassed only by his irrepressible humor. Never has learning the alphabet been so much fun." -**Richard Morris, Department of Neuroscience, The University of Edinburgh.**
