

# PhD/PostDoc opportunity

מכון ויצמן למדע

WEIZMANN INSTITUTE OF SCIENCE

Global vegetation activities, especially in the expanding arid and semi-arid zones, are strongly affected by climate. We study the response of photosynthesis, and the exchange of carbon water and energy at the leaf to ecosystem scales.

We are looking for a motivated PhD or postdoc who will join our dynamic and international team. You will use novel techniques of gas exchange of  $\text{CO}_2$ ,  $\text{H}_2\text{O}$ , carbonyl sulfide (COS), eddy covariance and remote sensing (SIF, satellites) from leaf to ecosystem scale in our forest research site and mobile lab.
