

Mac@WIS - Connect Mac to Jamf Connect

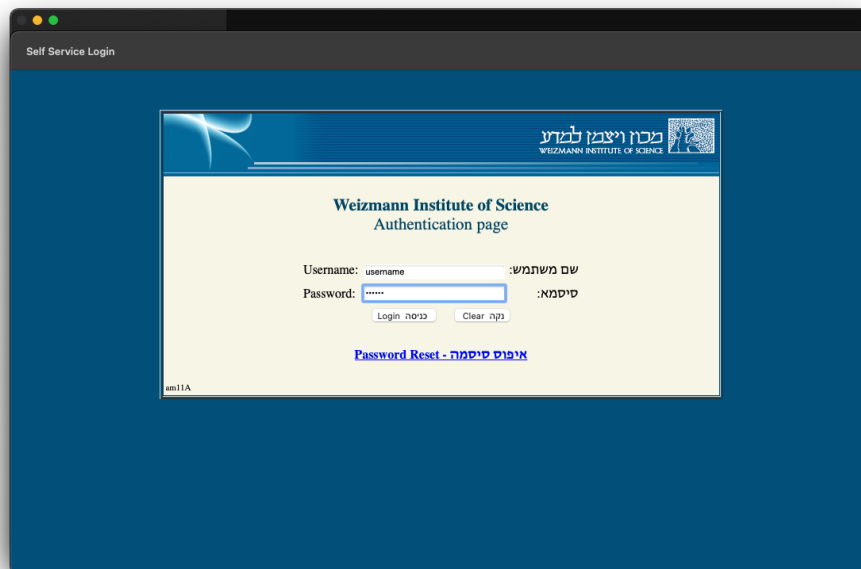

Jamf Connect:

Jamf Connect will convert a local user with local credentials to a local user with Weizmann credentials and adds a system add-on, that keeps the passwords synchronized.

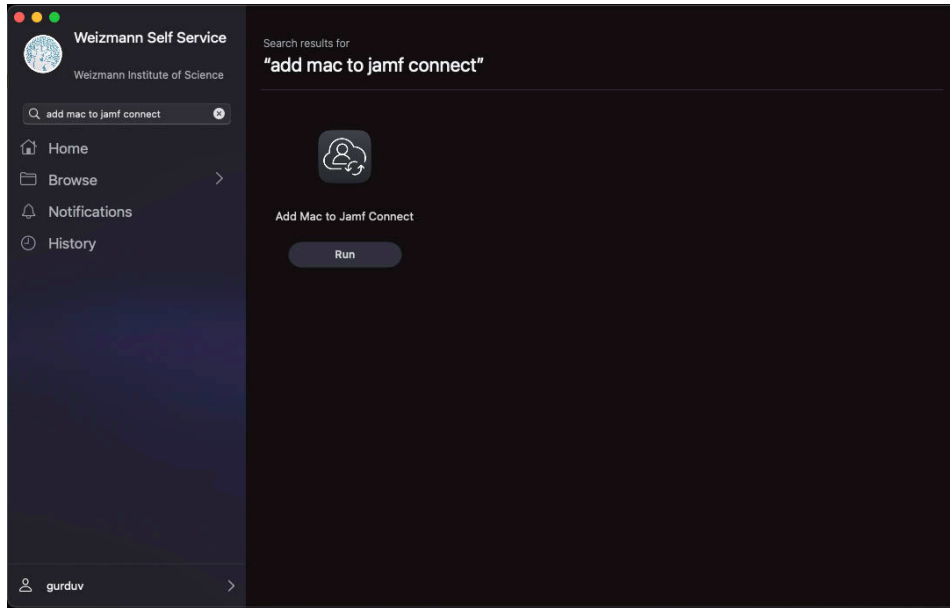

Please read entire guide before starting, as it requires a restart during the process.

Process:

Open Weizmann Self-Service and log-in.

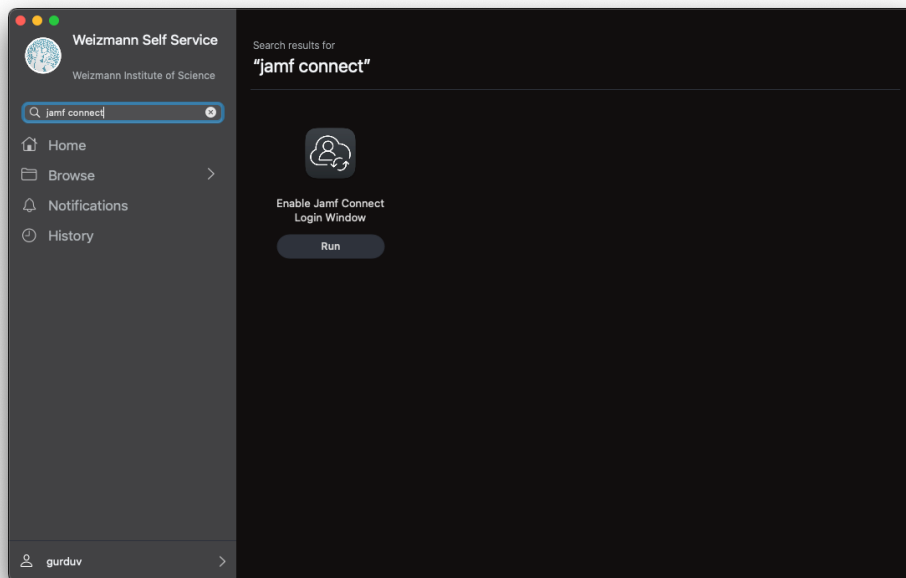

Search for the policy “Add Mac to Jamf Connect Group” and run it.

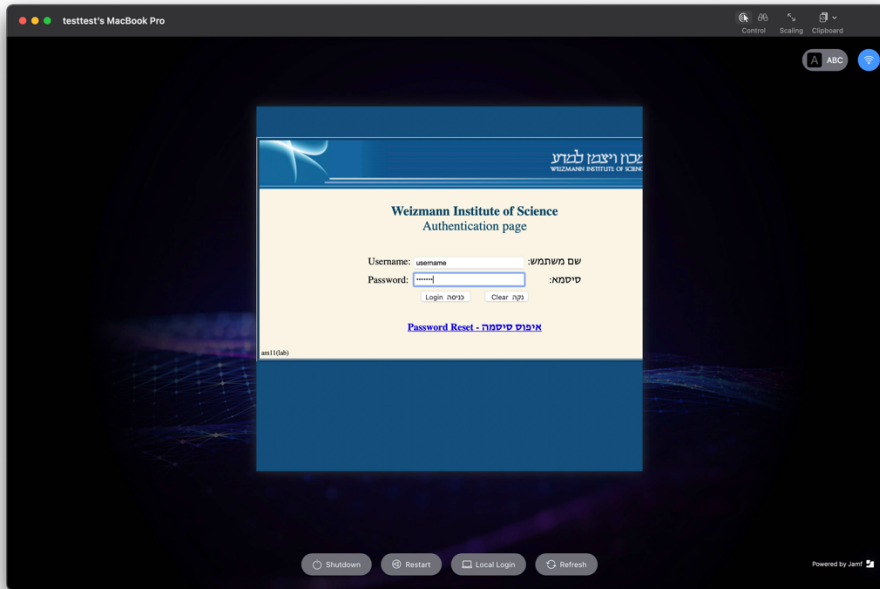

Now search and run the policy “Enable Jamf Connect login window”

The Mac will restart after about 1 minute

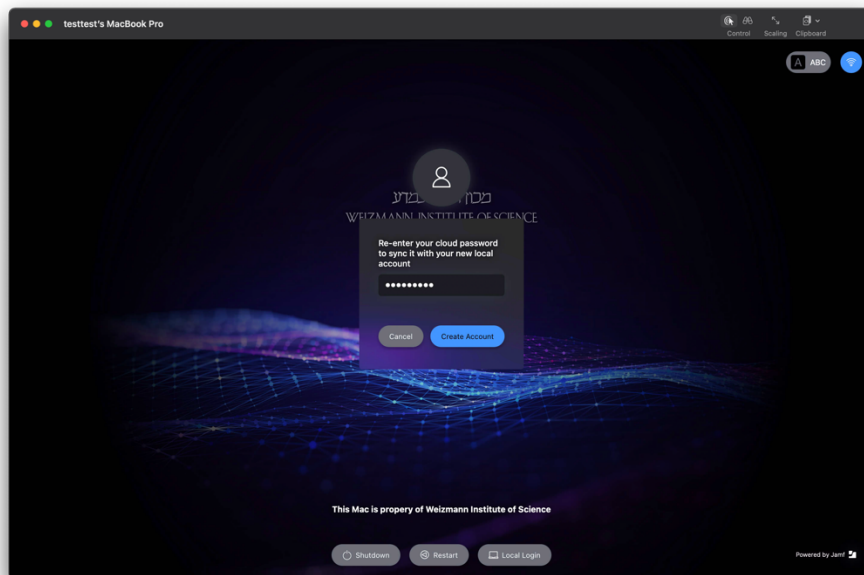

Make sure you can still access the guide while the computer restarts

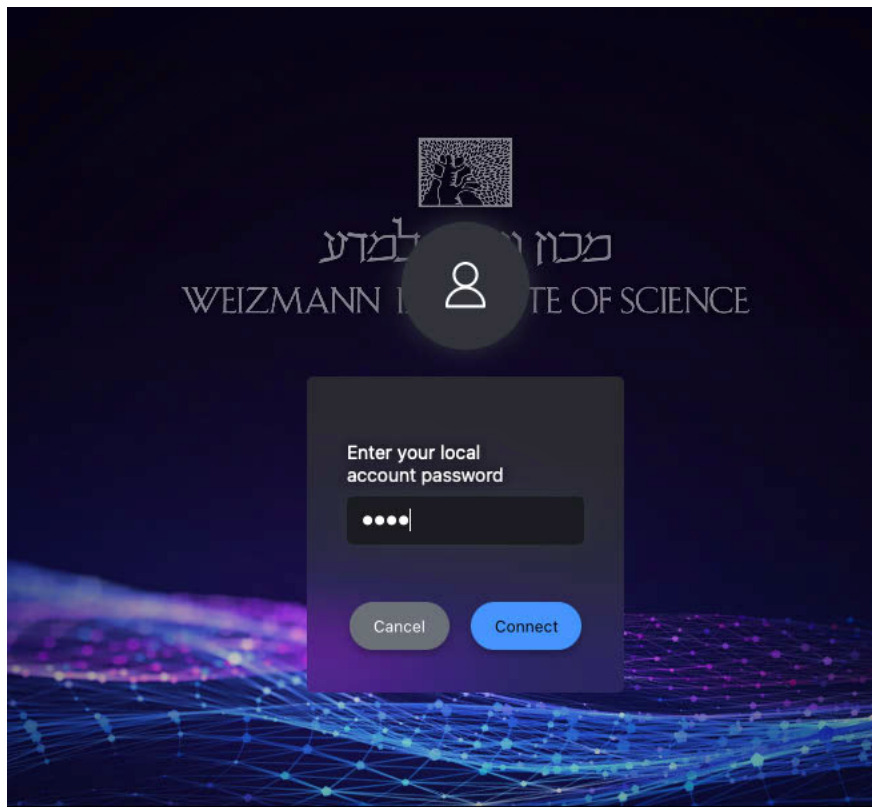

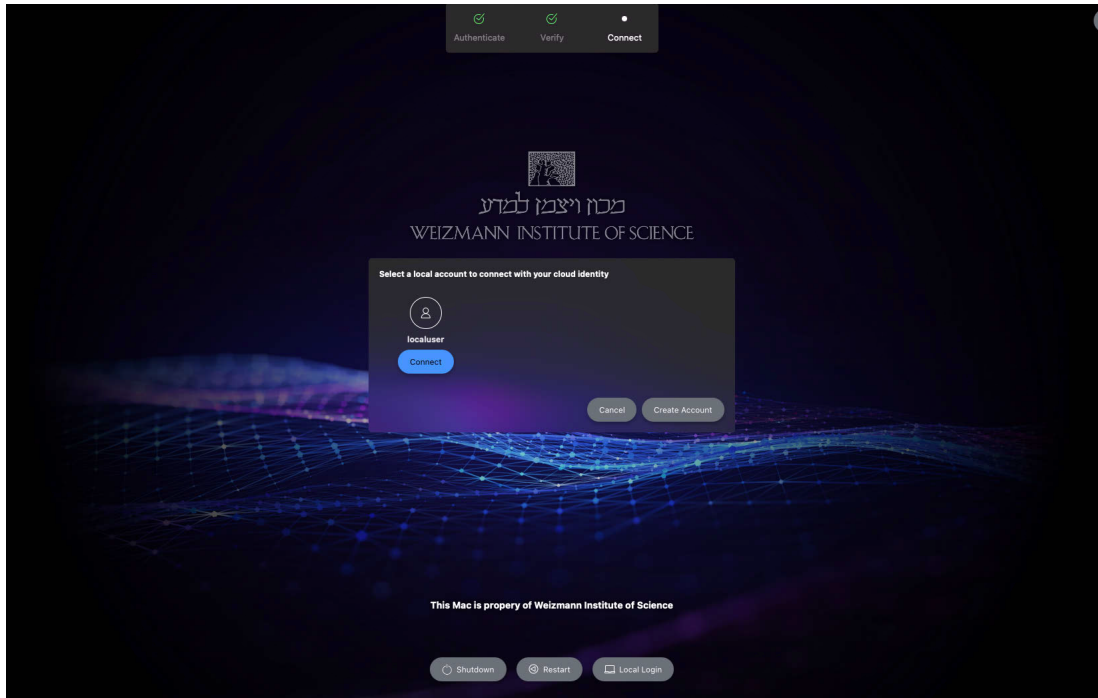

After the restart, you will see the Weizmann log-in window
When asked, enter Weizmann username/password:

Enter password again

Select the local user to convert, and enter the current local password for the user

The local user will be converted to a local user with Weizmann credentials.
After the login you can start working!
