

Optimal Control Theory of Harmonic Generation

Ido Schaefer and Ronnie Kosloff

The Fritz Haber Center
The Institute of Chemistry
The Hebrew University of Jerusalem

3.9.12

Outline

- Optimal control of harmonic generation was studied theoretically.

Outline

- Optimal control of harmonic generation was studied theoretically.
- A new formulation by the means of optimal control theory (OCT) is presented.

Outline

- Optimal control of harmonic generation was studied theoretically.
- A new formulation by the means of optimal control theory (OCT) is presented.
- The problem is naturally formulated in the frequency domain.

Outline

- Optimal control of harmonic generation was studied theoretically.
- A new formulation by the means of optimal control theory (OCT) is presented.
- The problem is naturally formulated in the frequency domain.
- Several examples demonstrate the efficiency of the new method.

A few results...

The spectra of the driving field (red) and time-dependent dipole expectation (blue) in several systems are shown.
