Contents

1	Introduction to Nonlinear Wave Dynamics	1
1.1	Hamiltonian Method for Description of Waves in a Continuous Medium	2
1.1.1	Hamiltonian Equations of Motion	3
1.1.2	Transfer to Complex Variables	4
1.1.3	Hamiltonian Structure Under Small Nonlinearity	5
1.1.4	Dynamic Perturbation Theory. Elimination of "Non-Resonant" Terms from the Hamiltonian	10
1.2	Dimensional Estimation of Hamiltonian Coefficients	11
1.3	Dynamic Equations of Motion for Weakly Non-Conservative Wave Systems	16
1.3.1	Taking into Account Linear Wave Damping	17
1.3.2	Allowing for Thermal Noise	18
1.3.3	Nonlinearity of Wave Damping	19
1.4	Three-Wave Processes	20
1.4.1	Confluence of Two Waves and Other Induced Processes	20
1.4.2	Decay Instability	22
1.4.3	Interaction of Three Waves with Finite Amplitude	24
1.4.4	Explosive Three-Wave Instability	26
1.5	Four-Wave Processes	27
1.5.1	Modulation Instability of the Plane Wave	28
1.5.2	Equation for the Envelopes	30
1.5.3	Package Evolution in Unbounded Media	31
2	The General Properties of Magnetodielectrics	35
2.1	Classification of Substances by Their Magnetic Properties	35
2.1.1	Diamagnets	35
2.1.2	Superconductors	35
2.1.3	Paramagnets	36
2.1.4	Magnetically Ordered Substances (Magnets)	36
2.2	Nature of Interaction of Magnetic Moments	38
2.2.1	Exchange Interaction in the Hydrogen Molecule	38
2.2.2	Interatomic Exchange	40
2.2.3	Interatomic Exchange of Large Spins	41
2.2.4	Indirect Exchange Interactions	42

2.2.5	Relativistic Interactions	43
2.3	Energy of Ferromagnets in the Continuum Approximation	45
2.4	Magnetic and Crystallographic Structure of Some Magnets	49
2.4.1	Crystals with Spinel Structure	50
2.4.2	Crystals with Garnet Structure	51
2.4.3	Crystals with Hexagonal Structure	52
2.4.4	Crystals with Rhombohedral Structures	53
3	Spin Waves (Magnons) in Magnetically Ordered Dielectrics	55
3.1	Hamiltonian of Magnons in Ferromagnets (FM)	56
3.1.1	Spectrum of Magnons in Cubic Ferromagnets	57
3.1.2	Amplitudes of Three- and Four-Magnon Interaction	60
3.1.3	Three-Magnon Hamiltonian	62
3.1.4	Four-Magnon Interaction Hamiltonian	63
3.2	Hamiltonian Function of Magnons in Antiferromagnets	65
3.2.1	Magnon Spectrum in Antiferromagnets (AFM)	65
3.2.2	Interaction Hamiltonian in "Easy-Plane" Antiferromagnets	68
3.2.3	Nuclear Magnons in "Easy-Plane" Antiferromagnets	69
3.3	Comments at the Road Fork	70
3.4	Calculation of Magnon Hamiltonian	70
3.4.1	Equation of Motion of Magnetic Moment	70
3.4.2	Canonical Variables for Spin Waves in Ferromagnets (FM)	72
3.4.3	Calculation of Frequencies and Interaction Amplitudes of Waves	73
4	Nonlinear Dynamics of Narrow Packets of Spin Waves	77
4.1	Elementary Processes of Spin Wave Interaction	77
4.1.1	Three-Magnon Processes	77
4.1.2	Modulation Instability of Spin Waves	80
4.2	Self-Focusing of Magnetoelastic Waves in Antiferromagnets (AFM)	82
4.2.1	Structure of Basic Equations	82
4.2.2	Properties of Unidimensional Equations	84
4.2.3	Stability of Solitons and Self-Focusing Theorem	84
4.2.4	Evolution of Magnetoelastic Waves in the Absence of a Linear Bond Between Magnons and Phonons	86
4.3	Methods of Parametric Excitation of Spin Waves	87
4.3.1	Transverse Pumping of Spin Waves in FM	87

4.3.2	Parallel Pumping of Spin Waves in FM	90
4.3.3	"Oblique" Pumping of Spin Waves in FM	91
4.3.4	Suhl Instability of the Second Order in FM	91
4.3.5	Parallel Pumping in "Easy-Plane" Antiferromagnets	92
4.3.6	Parametric Pumping of Nuclear Magnons	94
5	Stationary Nonlinear Behavior of Parametrically Excited Waves. Basic S-Theory	93
5.1	History of the Problem	95
5.2	Statement of a Problem of Nonlinear Wave Behavior	98
5.3	Phase Relations and Mechanisms for Amplitude Limitation	100
5.3.1	Analysis of Phase Relations	100
5.3.2	Nonlinear Mechanisms for Limiting Parametric Instability	101
5.4	Basic Equations of Motion in the S-Theory	102
5.4.1	Statistical Properties of a Non-Interacting Field	102
5.4.2	Mean-Field Approximation	103
5.4.3	General Analysis of Basic Equations of S-Theory	106
5.5	Ground State of System of Interacting Parametric Waves	108
5.5.1	Stationary States and Analysis of Instability	108
5.5.2	Ground State Under Low Supercriticality	111
5.5.3	Threshold of Generation of Second Group of Pairs	114
5.5.4	Ground State Under High Supercriticality	116
5.5.5	Nonlinear Susceptibilities of Parametric Waves	118
6	Advanced S-Theory: Supplementary Sections	121
6.1	Ground State Evolution of System with Increasing Pumping Amplitude	123
6.1.1	Ground State of Parametric Waves for Complex Pair Interaction Amplitudes	124
6.1.2	The Second and Intermediate Thresholds	125
6.1.3	Nonlinear Behavior of Non-Analytic Pair Interaction Amplitudes	128
6.2	Influence of Nonlinear Damping on Parametric Excitation	132
6.2.1	Simple Theory	132
6.2.2	Influence of Non-Analyticity on Nonlinear Damping	135
6.3	Parametric Excitation Under the Feedback Effect on Pumping	139
6.3.1	Hamiltonian of the Problem	139

6.3.2	General Analysis of the Equations of Motion	141
6.3.3	First-Order Processes	143
6.3.4	Second-Order Processes	146
6.4	Nonlinear Theory of Parametric Wave Excitation at Finite Temperatures	147
6.4.1	Different Time Correlators and Frequency Spectrum	147
6.4.2	Basic Equations of Temperature S -Theory	148
6.4.3	Separation of Waves into Parametric and Thermal	150
6.4.4	Two-Dimensional Reduction of Basic Equations	151
6.4.5	Distribution of Parametric Waves in k	152
6.4.6	Spectrum of Parametric Waves	153
6.4.7	Heating Below Threshold	153
6.4.8	Influence of Thermal Bath on Total Characteristics	153
6.5	Introduction to Spatially Inhomogeneous S -Theory	155
6.5.1	Basic Equations	155
6.5.2	Parametric Threshold in Inhomogeneous Media	157
6.5.3	Stationary State in Non-Homogeneous Media	160
6.6	Nonlinear Behavior of Parametric Waves from Various Branches. Asymmetrical S -Theory	165
6.6.1	Derivation of Basic Equations	165
6.6.2	Stationary States in Isotropic Case	167
6.7	Parametric Excitation of Waves by Noise Pumping	172
6.7.1	Equations of S -Theory Under Noise Pumping	173
6.7.2	Distribution of Parametric Waves Above Threshold	175
7	Non-Stationary Behavior of Parametrically Excited Waves	179
7.1	Spectrum of Collective Oscillations (CO)	179
7.1.1	Spectrum of Spatially Homogeneous CO in the Non-Dissipation Limit	179
7.1.2	Influence of Wave Damping on the CO Spectrum	181
7.1.3	Spectrum of Spatially Non-Homogeneous CO	182
7.2	Linear Theory of CO Resonance Excitation	184
7.2.1	Basic Equations and Their Solution	184
7.2.2	CO Excitation by a Microwave Field	185
7.2.3	Direct CO Excitation by a Radio Frequency Field	187
7.2.4	Coupled Motions of Collective Excitations of Parametric Waves and Sound	188
7.3	Threshold Under Periodic Modulation of Dispersion Law	189
7.4	Large-Amplitude Collective Oscillations and Double Parametric Resonance	193
7.4.1	Stationary State Under Periodic Modulation	193

7.4.2	Parametric Excitation of CO of Parametric Wave System	194
7.5	Transient Processes when Pumping is Turned on	194
7.5.1	Small Supercriticality Range	194
7.5.2	High Supercriticality Range	198
7.6	Parametric Excitation Under Sweeping of Wave Frequency	200
7.6.1	Qualitative Analysis of the Problem	200
7.6.2	Basic Equations of S -Theory Under Frequency Sweeping	204
7.6.3	Solution of S -Theory Equations	205
7.6.4	Dependence of the Number of Waves on the Pumping Amplitude	206
7.7	Problems	209
8	Secondary Parametric Wave Turbulence	213
8.1	Instability of Ground State and Auto-Oscillations	214
8.1.1	Properties and Nature of Spin Wave Oscillations	214
8.1.2	Numerical Simulation of Auto-Oscillation in the S -Theory	215
8.1.3	Conditions for Excitation of Auto-Oscillations	217
8.2	Route to Chaos in Dynamic Systems	216
8.2.1	Introduction	219
8.2.2	Elementary Concepts of Theory of Dynamic Chaos	221
8.2.3	Chaos of Parametric Magnons in CsMnF_3	225
8.3	Geometry of Attractors of Secondary Parametric Turbulence of Magnons	229
8.3.1	Effective Phase Space and Dimensionality of Inclusion	229
8.3.2	Experimental Study of Attractor Structure in CsMnF_3	230
8.4	Secondary Turbulence and Collapses in Narrow Parametric Wave Packets	233
8.4.1	Equations for Envelopes	233
8.4.2	Stationary Solitons	235
8.4.3	Average Characteristics of Secondary Turbulence	236
8.4.4	Destruction of Parametric Solitons with Large Amplitude	237
8.4.5	Soliton Mechanism of Amplitude Limitation	239
9	Experimental Investigations of Parametrically Excited Magnons	243
9.1	Experimental Investigations of Parametric Instability of Magnons	243
9.1.1	Methods and Materials Investigated	243
9.1.2	Measurements of Constants in Spin Wave Spectra	244

9.1.3	Spin Wave Damping	245
9.2	Nonlinear Behavior of Parametric Magnons – General Information	250
9.2.1	Measuring Technique for Susceptibilities χ' and χ''	250
9.2.2	Comparison of <i>S</i> -Theory and Experiment for Susceptibilities	252
9.2.3	Measurements of Interaction (Frequency Shift) Amplitude	255
9.2.4	Nonlinear Ferromagnetic Resonance	257
9.3	Investigations of Stationary State With One Group of Pairs	258
9.3.1	Nonlinear Susceptibility in the One-Group State	259
9.3.2	Direct Measurement of Pair Phase	260
9.4	Electromagnetic Radiation of Parametric Magnons	262
9.4.1	Frequency of Parametric Magnons	262
9.4.2	Frequency Width of Parametrically Excited Magnons	263
9.5	Collective Resonance of Parametric Magnons	266
9.5.1	Experimental Technique	267
9.5.2	Frequency of Collective Resonance	269
9.5.3	Susceptibility to Field of Weak Microwave Signal	272
9.5.4	Linewidth of Collective Resonance	273
9.5.5	Oscillations of Longitudinal Magnetization	274
9.5.6	Other Methods for Excitation of Collective Oscillations	275
9.6	Stepwise Excitation in YIG	276
9.6.1	Re-Radiation into the Transverse Channel	277
9.6.2	Interaction of Second-Group Magnons and Transverse Signal	278
9.7	Conditions of Excitation of Auto-Oscillations of Magnons	281
9.7.1	Experimental Setup	283
9.7.2	Intensive Auto-Oscillations of Mode $m = 0$	284
9.7.3	Crossing the Instability Boundary and Spatially Inhomogeneous Auto-Oscillations	286
9.7.4	Instability of Higher Collective Modes	288
9.8	Effect of Radio-Frequency Field Modulation on Parametric Resonance	289
9.8.1	Suppression of Parametric Instability by Modulation	289
9.8.2	Stationary State of Parametric Magnons Under Modulation of Their Frequency	291

9.9	Double Parametric Resonance and Inhomogeneous Collective Oscillations of Magnons	293
9.10	Parametric Excitation of Magnons Under Noise Modulation of their Frequencies	294
9.10.1	Threshold Amplitude of Noise Pumping	294
9.10.2	Efficiency of Phase Mechanism Under Noise Pumping	296
10	Nonlinear Kinetics of Parametrically Excited Waves	301
10.1	General Equations	301
10.2	Limit of the <i>S</i> -Theory	305
10.2.1	Form of the Green's Function	305
10.2.2	Separation of the Waves into Parametric and Thermal	306
10.3	Nonlinear Theory of Parametric Excitation of Waves in Random Media	307
10.3.1	General Equations in the <i>S</i> , g^2 -Approximation	308
10.3.2	Distribution Function of Parametric Waves	309
10.3.3	Behavior of Parametrically Excited Waves Beyond the Threshold	310
10.4	Consistent Nonlinear Theory for Parametric Excitation of Waves	311
10.4.1	Spectral Density of Parametrically Excited Waves	311
10.4.2	Structure of the Distribution Function in <i>k</i> -Space	313
