PhD Track for Medical Residents and Specialist MDs

General
The Feinberg Graduate School offers a unique and selective PhD track for outstanding medical residents and specialist MDs. This special track is partially funded by the Linda and Michael Jacobs Charitable Trust. The Weizmann Institute of Science aspires to collaborate with graduates of this program in its research activities, as visiting scientists or consultants. If you are interested in applying to the program, please note the following:

Eligibility
The program is designed for medical residents who have completed at least two years of residency in any medical specialty (or specialists working at the hospital), who have an interest in basic science research. You may only be nominated as a candidate to the program by the management of the hospital in which you do your residency (or work as a specialist), who must have the intent to include you (upon completion of your studies at WIS) among the hospital’s leading research staff, in addition to handling clinical duties.

Selection of Participants in the Program
Each interested hospital selects candidates to the program from among its medical residents. The head of the program at WIS reviews each application. Following this review, the head of the program invites eligible outstanding candidates for an interview with a special committee. The committee consults with the relevant hospital and reports to the head of the program, who then submit recommendations to the FGS Dean.

Length of the Program
- The program is designed to last four and a half years. Unique to this track, students may return to full-time work in the hospital during the last six months of the program, during which time the thesis is written.
- In rare and special cases, where there is a real and objective need to complete studies in a shorter time and where you can demonstrate that you are capable of completing your studies in a shorter time, the program can be condensed into three and a half years (at the discretion of the Board of Studies for the Life Sciences). If you receive approval to do a condensed program, a special timetable will be set up for you.
Academic Requirements
As a student in this program, you are required to fulfill all of the academic requirements for PhD students in the Life Sciences. Please note that as part of your study program you must take the following courses:
1. An Overview of Molecular Biology
2. Protein Structure and Function
3. RNA World

Time Dedication
As a participant in this program, you are expected to take part in all study-related activities required of students in the regular track, including laboratory research, group meetings, departmental seminars and courses, for at least four and a half days per week (coordinated in advance with the head of the research group). In the remaining time, you are entitled to engage in clinical activity in order to maintain your relevant clinical skills.

Commitment by the Hospital
The hospital makes a commitment to participants in this program: The hospital will “freeze” your appointment for four years, to allow you to devote yourself fully to studies and research at the Weizmann Institute of Science. The hospital will not have any claim on your time, except for one day per week. At the conclusion of your studies at WIS, the hospital will allow you to resume your residency (or work).

Fellowship
During the time that you are studying, your position at the hospital is frozen, and you will not receive a salary from the hospital. During this time, you receive a WIS fellowship of 10,000 NIS per month (for a period of up to four years).

Intellectual Property Form
If you are accepted to the program, you may not start your studies before you AND the relevant authorities in your hospital sign the form that indicates acceptance of the Weizmann Institute policy on a form of consent concerning intellectual property rights. You are not allowed to start your studies (and certainly you may not receive a fellowship) without signing this form.

Application Procedures
The application process for this program is the same as the process for applying to the regular PhD program. Please see How to Apply for a PhD. The list of documents that you are required to submit is slightly different from the regular PhD track requirements.

Application Deadline
There is no application deadline. Applications may be submitted at any time.
