

Erratum for paper
“Detecting faint curved edges in noisy images”
by S. Alpert *et al.* published in ECCV 2010

The authors regret an error in deriving the search space for the set of curves scanned by the beam curve algorithm (Section 3.2). Specifically, the search space, N_L , is exponential in L , the curve length. As a consequence, in contrast with the text, the detection threshold does not approach zero as L goes to infinity. This affects eqs. (6)-(10).

The authors thank Nati Ofir for noticing this mistake.
