

Alfred Lothar Wegener 1880-1930

Germany

Polar researcher

Proposed continent migration and splitting of tectonic plates from recording of glacier creeping lines on both sides of the Atlantic

Proofs:

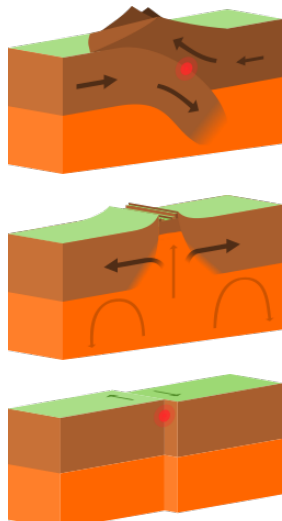

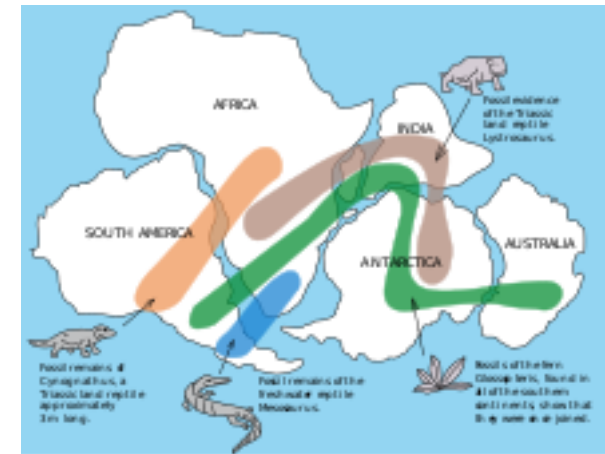

Matching coast lines east and west of the Atlantic ocean

Similar fossils on both coasts

Directionality of glacier lines at the poles.

The thin crust layer below the Atlantic.

Direct measurement of Europe to America distance.

Modes of continent splitting:

Shear

Separation

Convergence

The continents 300,250 & 100 million years ago
