Electric Coil Heaters

Can Place Your Life at Risk

A number of people in Israel have died recently as a result of using electric coil heaters.

These types of heaters can easily set an entire area on fire when operated near curtains, wastepaper baskets, or other flammable materials.

**Use safe heating devices only,
such as air conditioners,
radiators or space heaters
that comply with Israeli Standards.**

- Do not plug heating devices into multi-socket converters or extension cords.
- At the Weizmann Institute, use of electric coil heaters or heaters with direct radiation is prohibited.
- Do not use gas or kerosene heaters.
